

Effective Quality Management Systems

Build or improve a quality system with Lean principles in mind

Your instructor:

Justin Paur is the Vice President of Production Services at NACS, a production equipment and medical and pharmaceutical contract manufacturing supplier. He has worked on the product development, operations and quality sides and is a specialist in the medical device, pharmaceutical and biotechnology industries.

How do you build a quality system that adds control where you need it, removes it where you don't, and allows you to be innovative and nimble? This course provides tools and framework needed to identify requirements and risks, and to custom build a quality system to match your company's needs and culture. With an eye toward current and future regulations, implementing best practices across industries and a practical foundation, you can build a quality system.

What Will Be Covered?

This interactive course provides participants the knowledge and tools to develop a risk-based Lean quality system and implement it in their organization. Material will be presented and reinforced through experiences and examples.

- Overarching structure of a comprehensive quality system
- How to build a system from the ground up, or improve elements of an existing one
- Breaking down regulations for your industry
- How to make your quality system effective without being overbearing
- Understanding a risk-based approach
- Driving culture in a resistant organization

Who Should Attend?

Manufacturing professionals involved with the execution or development of a quality system that has influence in the manner in which the system is run or setup.

Wednesday, July 17, 2019 8:00 a.m. – 4:00 p.m.
