Business Improvement's Service Model

Clearing away clutter by continuously improving how we work allows us the space to focus on what truly matters. **So our commitment must be:**

- To work toward the simplest, most efficient, and effective solutions to problems
- To design simple and efficient work processes, and measure their outcomes
- To promote an environment of continuous improvement

The Beginning

"Simplicity is the soul of efficiency"

Garment Fitting Process Improvement

Problem

Lack of a standard process for garment fitting that is applicable to every patient to serve as a fitting guide to ensure that all patients receive the right size & style of garment the first time they arrive.

Goal

Develop a standard combination of questions, measurements, and process changes to ensure we send the patient the right garment the first time, every time.

Tools & Methods

- Voluntary random sample collection event to collect mock patient data.
- Clinical Specialist given different combinations of mock patient profile information (height, weight, body shape, etc.) and asked to "fit" the patient into a garment using their current process.

Next Steps

- Analyze the Clinical Specialist's responses
- Identify how much variation exists in the final garment selection
- Expecting to see a differences in repeatability and reproducibility based on the combination and amount of patient detail provided in each scenario.

Sales Reporting & Analytics Forecasting Tool

Problem

The agility, flexibility and interactive capability of Sales reporting structures & analytical support are not capable of providing the level necessary for Account Executives and Regional Directors to effectively manage their business.

Goal

Realign the Sales reporting and analytical support to the Fiscal Year 2013 strategy while providing improved visibility of and enhanced interactive capabilities with Facility and Patient account details.

The Journey

“More is more and less is a bore”

Project Retention

Business Description: Since October 2012, the product return to shipment ratio is **X%** - excludes deceased patients and medical discontinuations. Team objective is to reduce this ratio to **X% by Q1 FY2014**.

Discoveries

1. No formalized process to identify high risk patients
2. Limited review of training paperwork to proactively respond to high risk patients
3. Outcomes monitoring (OM) program focused on gathering of information vs. supporting patient's use of therapy
4. Deficient coordination of care compounded by limited clinical expertise OM calls
5. Absent formal training program for new contract trainers
6. Absent formal ongoing training program for contract trainers
7. Planning Kaizen Event in September – Binder / Forum

Actions

1. Developing Training Forums (Live / Webinar) for current contract trainers
2. Documenting process for identifying and responding to high risk patients
3. Reviewing and revising current contract training onboarding process
4. Developing ongoing training process & supporting material for contract trainers
5. Revising and updating Onboarding training material for new contract trainers
6. Conducting pilot to determine efficacy of patient focused, clinical outcomes calls
7. Identifying key contact points with Account Executives
8. **Completion of Patient Training Kaizen**
9. **Revision of Contract Trainer tools and resources**
10. **Identify and developed new Train the Trainer Methods and Materials**

1. Implemented Patient Training Review Process for High Risk Patients
2. Developed CS follow-up for High Risk Patients
3. Revised OM questions
4. Developed patient support scripting
5. Transitioned OM calls to CS
6. Developed memo for contract trainers; Identify & Respond to High Risk Patients
7. Incorporated Patient Training / Contract Trainer Overview in AE Training
8. Developed guidelines/expectations for new AE's and Contract Trainers and vice versa
9. Developed Training Preparation Checklist for Contract Trainers.
10. Revised train the trainer material and process

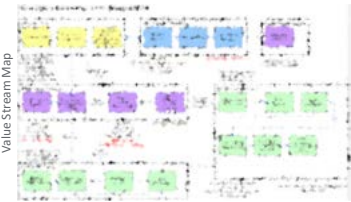

Recommendation: Based on the early success of the pilot, with success determined by reducing product returns and enhancing patient outcomes, the team proposes realigning resources to transition OM calls to the Clinical Specialist.
